

Newton's 4-Day National Race for the Study of Soil Science

Own representative, Calcutta: As long as the country is going, the country's agricultural land is declining. Again, additional crops, due to unproductive chemical fertilizers and the use of insecticides in the hope of gaining, instead of increasing the yield, it decreases after a few years. The impact of soil from pollution is changing. If not able to find a way out of this, the country's total agricultural production will hit such a major in the near future, as the livelihood of the farmer will also be questioned. All these issues have been going on for the four-day national level discussion meeting and the 82nd annual conference of Indian Society of Soil Science is going to be held. From 11 December to 14 December this conference will be held at the Amity University campus in Newtown. The state agriculture minister Ashish Bandyopadhyay will be present as the chief guest. The president of the organizing committee, Dr. HS Sen, said this at a press conference in Kolkata Press Club on Saturday. he says, Approximately 500 soil scientist from across the country will join this discussion. In 1934 this Calcutta was born of this national organization of scientific research on soil. About 20 years later, the Society's annual conference in Calcutta is going to be held, organizers said.
